

Versadex Arrest/Booking subsystem

The Arrest/Booking subsystem is used to record, manage, and control police involvement with an arrest, incarceration, and subsequent prosecution. The core record is the Information Sheet which is linked to a specific subject and one or more arrest/booking charges, warrants, cell control, appearance control, court schedule control, and disposition records. A Cell Management component is incorporated as well. It indicates if the subject is currently in a cell and lets you keep a history of all their activities while being held in your facilities (e.g., out of cell, visitors, phone calls, injuries, medication, etc.). A Service Control function will automatically keep track of the service status of your warrants, summonses, and subpoenas and provide you with a summary by court date.

>>>Features

- Records the details, charges and processes that were followed at the arrest.
- Arrest details can also be entered on mobiles.
- Captures prisoner property, records injuries, medication, etc.
- Auto-checks for outstanding warrants, previous history (violent, suicidal, etc.).
- Can execute local or distant warrants.
- Supports different processing for juveniles.
- Can generate checks against state and national data bases.
- Extensive cell management features with transport controls.
- Optionally can transmit captured arrest data to Mug-Shot and Live Scan systems and receive thumbnail images back for storage and presentation from the RMS.
