

# Property subsystem

The Property subsystem, an integrated component of the Versadex RMS, is used to enter details about property items categorized as evidence, found, seized, pawned, lost, and stolen. Unique property types are supported for articles, bicycles, guns, securities, jewellery, drugs, alcohol, miscellaneous items, vehicles, boats, and motors. Extended facilities are supplied for storage control, evidence continuity and control, pawn information, and National Police Network entry control. By incorporating evidence/in custody items with pawned records and with stolen/lost items, property reporting to the officers is consistent while assuring that items are automatically matched/checked at the time of entry (lost/stolen against pawned/recovered). Property can be viewed online as part of the related report. Extensive matching and retrieval facilities are provided to permit detectives to use the system to easily search for and match lost/stolen and found/seized/pawned items.

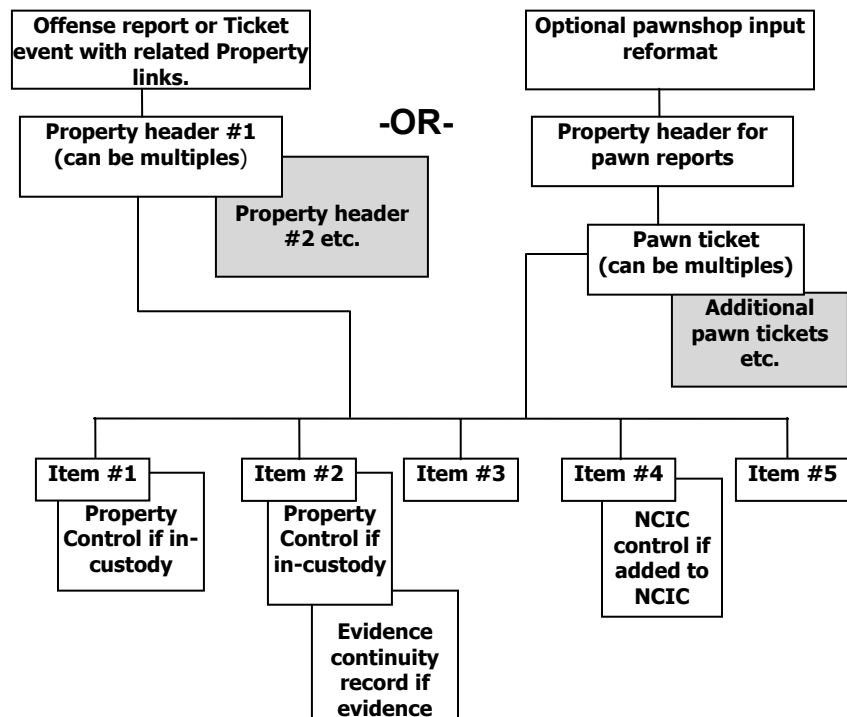

The Property system also optionally supports the use of bar code labels. A 'batch scan' entry capability is provided for the capture, transfer out and return of property. Mobile hand held bar code scanners are also supported to make it easier to manage the property room.

## >>>Features

- Common property indices across lost, stolen, and impounded evidence and pawned property for instant matching.
- Uses NCIC (or CPIC) property codes and tables for easy and automatic checking and posting to state and national property systems.
- Direct entry oriented with prompts, in context help, choice table selection, and in the mobile implementation, cue card help.
- Bar code enabled with label printing, station scanning and mobile scanner support.
- Comprehensive chain of custody controls with electronic signature support.
