

Emergency Call Handling & Management

Lead the Change
Towards NG9-1-1

 versaterm

Meet the Needs of Modern Communication

The existing analog 9-1-1 system has served us well for decades. However, the aging infrastructure and rapid innovation of technology are causing considerable strain. Next Generation 9-1-1 (NG9-1-1) digital platform offers a range of advanced features, including multimedia communication, better location accuracy and enhanced interoperability. These capabilities help our emergency communications meet the evolving needs of communities.

Explore how to upgrade your system to accommodate the demands of modern emergency call handling.

Management System

Komutel

Upgrade your emergency communication system for better location accuracy, interoperability and scalability

As NG9-1-1 legislation continues to evolve, Public Safety Answering Points (PSAPs) and Emergency Communication Centers (ECCs) should prepare for the migration to a compliant, more agile system.

A digital, internet protocol (IP)-based infrastructure is now necessary to address the limitations of the existing analog system and adapt to the ever-changing technology landscape. This shift removes the "swivel chair" operations to ensure a more efficient, effective and reliable emergency call handling system that benefits both the public and responders.

Komutel solutions help your operations streamline this transition to NG9-1-1 while reducing infrastructure costs and ensuring that your systems will be prepared moving forward.

Forward Thinking

Komutel's solutions are designed to evolve alongside changes in NG9-1-1 standards and emergency communication trends.

Industry Thought Leader

Komutel works closely with PSAPs nationwide to define standards within emergency call handling

Flexible Solutions

Software-based solutions are hardware neutral and work with most PBX and SBC vendors

Complementary, Cohesive Modules

Additional modules such as document management, call management and call recording increase system interoperability

People-Driven Approach

Your agency is dedicated to effectively manage response expectations - we designed our solution and services to fit the needs of your call handlers.

Personalized Training

Your staff will receive customized training focused on your needs that can be in-person or remote

Implementation

Experienced in remote or on-site implementation projects of all sizes working with multiple vendors

Technical Support

Our service contract guarantees 24/7 technical support and updates for all solutions

Komand911

A streamlined, modular and browser-delivered SIP softphone for NG9-1-1

Customizable & Comprehensive Modules

Integrated 911-specific modules include call management, incident information, phone release reasons, transfer history and status management

Ability to Work from Anywhere

Dispatch and call handlers have the flexibility to work from anywhere and still efficiently handle calls from the command center or a remote location

Searchable Resource Directory

Customizable with colors and agency logos, the resource library allows unlimited speed dial, documents and URL buttons

SIT911i3

An on-premise SIP softphone that efficiently manages calls, reduces handling time, and maximizes contact reach

Streamline Processes

Access easily directory lookups, integrated documents, team member availability, emergency procedures, and security cameras

Improve Call Handling

React to evolving situational needs more quickly with the solution's comprehensive call information display

Increase Efficiency

Take advantage of streamlined call transfer capabilities through features linked to call history and instant replay

Komlog

Meet compliance, protection and staff training needs with emergency call recording designed for public safety

Securely Save & Manage Recordings

Organize, share and listen to your recordings anytime and anywhere with multiple security profiles

Audio & Multimedia Recording

Record real-time text, screen, audio and geolocation

Cross-platform Compatibility

Hardware and software solution options integrate with analog, digital and IP-based systems

Komstat Module

Actionable reports for better decision-making

A custom report generator solution that gathers and analyzes information from your telecom infrastructure.

Access Relevant Information

Usage data is collected directly from your system's own Call Detail Recording

Identify Areas of Improvement

Relevant details are compiled into different reports to provide key insights that can be applied to business operations

Streamline Time Management

Automated reports allow for staff to devote more time to urgent needs, boosting performance during peak and congestion periods

Komsync Module

Increase efficiency with database centralization

Integrate information in one place to minimize redundant tasks and provide relevant real-time information

Establish Interoperability

Synchronize files and data in a centralized database for near real-time interoperability between applications

Use Resources Efficiently

Reduce management and maintenance costs and overhead by simplifying data structures and eliminating redundant data processing

Unanswered Call Management System

Track, organize and call back dropped or abandoned calls

Improve Response Capabilities

The UCMS module is configurable to perform automatic callbacks to dropped or abandoned 911 calls

Use Custom Messaging

In the case of wireless calls, tailor SMS message according to predetermined standard operating procedures

Meets Your Requirements

Can be configured according to ALI policies; specific policies can be applied for the management of short-term calls for wired and cellular phones
