

# Versaterm Athena Suite

Every Call. Every Action. One Platform.

Public safety agencies need tools that match the work they do every day. The Versaterm Athena Suite connects dispatch, field operations and records in one integrated platform, giving teams access to the information they need from call intake to case closure.

The real strain in public safety software often sits between systems. A call starts in dispatch, continues in the field and becomes part of the official record. When those steps rely on separate platforms, the work slows down. Information gets re-entered. Supervisors lose visibility. Officers spend more time finishing reports after the response.

## Connected Technology for the Way Your Agency Responds

The Versaterm Athena Suite keeps operational information moving from the first call through the final record. Dispatchers, officers and records teams work from one connected view that supports faster action and cleaner documentation. CAD, MDC and RMS draw from the same information, so every role has a clearer view of the call, the response and the record behind it.

For agencies that need mission-ready tools without added system complexity, Versaterm Athena Suite brings core public safety workflows together in a practical platform. It closes the gaps between systems with connected tools built for public safety operations, all backed by Versaterm's public safety experience and support.

### Versaterm Athena CAD

Dispatch decisions depend on clear information from the first call. Versaterm Athena CAD helps dispatchers manage calls, recommend available units and coordinate response activity from a connected operational view. Built-in ESRI routing identifies the fastest available unit using real-time GPS data. Configurable views and predefined templates help agencies support routine calls, planned events and complex multi-agency responses.

#### Built-In ESRI Routing

Identifies the fastest available unit using real-time GPS data for police, fire and EMS

#### Location Alerts

Hazardous material, incident history, building details and user defined alerts (guns, dogs, special needs, etc.)

#### Configurable Views & Templates

Predefined templates support routine calls, planned events and multi-agency responses for more complex scenarios

#### Deep Array of Interfaces

NCIC, ESO Fire RMS, ProQA, station alerting and more for full interoperability

## Versaterm Athena RMS

Versaterm Athena RMS helps officers complete accurate records with less duplicate work. Call for service data flows directly from CAD into the report, reducing re-entry at the start of documentation. More than 40 report templates and real-time Incident-Based Reporting (IBR) validation help reduce writing time and catch errors before submission. The result is NIBRS-compliant documentation that supports officers, supervisors and agency leadership.

### CAD-to-Report Data Flow

Call for service data populates directly from CAD; no re-entry at the start of documentation

### 40+ Report Templates & IBR Validation

Real-time validation catches errors before submission; reduces writing time agency-wide

### Field Intelligence

Captures intel on people, locations, vehicles and property; managing related activity inside the same records environment, keeping information easier to search

### C.I.D. Case Packager

Bundles all incident history, notes, property and media into one zip file for DA submission

## Versaterm Athena MDC

While connecting to live incident information from the patrol vehicle, officers can access call details, location alerts and query results, helping them stay aligned with dispatch as response develops. Field activity stays connected to dispatch and records, so information moves with the call instead of being recreated later. Incident Command & Control functionality gives command staff a field-based view of unit status and incident activity. It supports larger responses while helping capture the documentation needed for post-incident review and FEMA reimbursement.

### Mapping & Routing

Layers, incoming units, collision avoidance, actual vs dispatched location

### History & Premise Information

Safety issues, hazards, cautions and people information at every call location

### NCIC & TLETS Queries

Results returned in under two seconds; officer and dispatcher notified simultaneously

### Incident Command & Control

Field-based command view supporting multi-unit response & FEMA documentation

## Extend the Value of Versaterm Athena RMS

Records become more valuable when related work stays connected. Versaterm Athena RMS supports additional functionality for specialized agency needs. These capabilities help agencies manage related activity inside the same records environment, keeping information easier to search, review and use.

### **Analytics Module**

Real-time visibility into operational trends through interactive dashboards and secure data access.

- Interactive charts for a clear understanding of trends
- Actionable list for individual users to easily access records
- Personalized data views that allow for meaningful insights
- Real-time access to secure data

### **Animal Control Module**

Animal shelter and animal control workflows within Versaterm Athena RMS.

- Search by chip ID, breed, gender, name, acquired date range, etc.
- Intake form details include pickup location and owner
- Tracking events, attachments and bite tracking records
- Associate call for service records with any bite tracking record

### **K9 Module**

Manage the training, care and operational activity of K9 units within the RMS environment.

- Track veterinary visits and all K9 unit certifications
- Assign K9 teams and track training or certifications
- Detailed training and call-out records including weather and terrain
- Monthly breakdowns of training and deployment activity with detection success metrics

### **Drone Module**

Document drone activity within the RMS environment, linked to calls and incident case numbers.

- Associate drone reports with call for service
- Link to incident case numbers
- Precise location mapping
- Direct export for FAA and state reporting

#### **About Versaterm**

Versaterm is a global public safety solutions company helping agencies transform their organizations by providing innovative solutions and expertise. We measure our success through long-term partnerships and responsive service as well as the day-to-day impact our technology has on the people who rely on it.
